

POLYURETHANE APPLICATIONS

BALLS & CHECK VALVES

Pleiger Plastics Polyurethane Balls and Check Valves

- Plei-Tech® check valve balls are used in pumps to improve pump performance and help pumps operate quietly.
- Polyurethane is ideally suited for ball check valves because of its outstanding abrasion and chemical resistance.
- The dynamic performance of Plei-Tech® polyurethanes allow for check valve operation at higher pressure and speeds.
- Precision plastic balls from .75" to 10" are molded with or without metal inserts, and other polyurethane plastic ball sizes can also be custom molded.
- Both the urethane and the insert are selected to match performance demands with specific gravity needs. Durometers range from 80°A to 75°D.
- Pleiger Plastics Company can either furnish plastic balls "as cast" or "precision ground" for more exacting ball type check valve requirements
